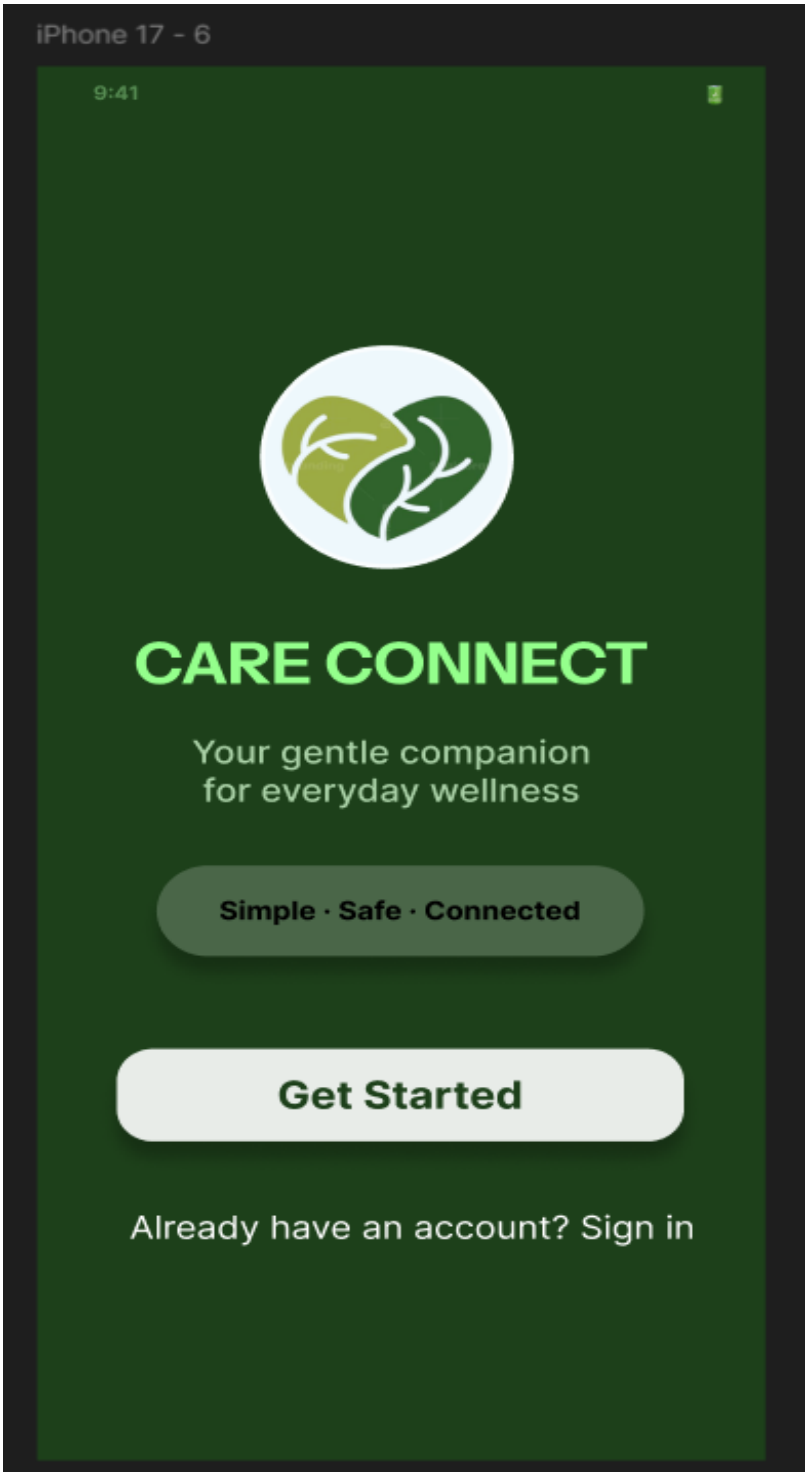
CareConnect

Designing a Supportive Digital Experience for Aging Minds



Your gentle companion for everyday wellness

Problem Statement

Design a simple, accessible mobile app that helps elderly users manage medications, track emotions, and stay connected with family.

Goals:

• Easy for first-time smartphone users
• Reduce caregiver anxiety
• AI-powered proactive care
• Accessibility-first design

Design Process

Understand → Research → Ideate → Prototype

User Persona

Meena Joshi, 68 — Retired Teacher
Goal: Stay independent & connected with family
Pain Points: Forgets medicines, small text confusion

Key Features

- Medicine reminders
- AI Voice Assistant (Cara)
- Family connect
- SOS Emergency support

Conclusion

CareConnect acts like an invisible family member — always there to support, remind, and connect elderly users.
